

Consistent with the findings of the previous studies, the results of the present study indicate that the use of a single, standardized, and validated instrument (the GPP) is a feasible and reliable method for assessing the prevalence of GPP in a large, diverse population of children and adolescents. The results of the present study also indicate that the use of a single, standardized, and validated instrument (the GPP) is a feasible and reliable method for assessing the prevalence of GPP in a large, diverse population of children and adolescents.
